DETAILED ACTION

Response to Arguments

1. Applicant's election of group IV in the reply filed on 2/22/07 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

- 2. Claims 1-15, 18-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 02/22/07.
- 3. However, in consideration of the restriction requirement resulting in group IV, drawn to two distinct methodologies, a second restriction requirement under 35 U.S.C. 121 is deemed necessary.

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 16, drawn to a method for identifying agent compounds capable of inhibiting 27-hydroxy-7-dehydrocholesterol reductase activity by measuring enzyme activity, classified in class 435, subclass 7.1.
 - II. Claim 17, drawn to a method for identifying agents capable of interfering with the expression of 27-hydroxy-7dehydrocholesterol reductase activity by measuring RNA expression, classified in class 436, subclass 94.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1636

2. Inventions I and II are directed to related processes. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed differ in design and scope. The methods of group I, drawn to a method for identifying agent compounds capable of inhibiting 27-hydroxy-7dehydrocholesterol reductase activity by measuring enzyme activity is distinct from the methods of group II, drawn to a method for identifying agents capable of interfering with the expression of 27-hydroxy-7dehydrocholesterol reductase activity by measuring RNA expression analyzes the activity level of the enzyme 27-hydroxy-7-dehydrocholesterol reductase in the presence of an inhibitor, whereas, the method of group II, measures the expression level of the enzyme in the presence of an inhibitor. The method steps, reagents and results for analyzing enzyme activity differ greatly than the quantification of mRNA levels. An inhibitor that only acts on the activity of the enzyme may not interfere with the expression of that enzyme, thus the mRNA levels would not be affected. A search for a method of analyzing enzyme activity would not be co-extensive with a search for methods for determining mRNA levels, and therefore require additional burdensome searches. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

- 3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Application/Control Number: 10/659,764

Art Unit: 1636

273-8300.

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention. Any inquiry concerning this communication or earlier communications from the examiner should be directed to

Kimberly A. Makar, Ph.D. whose telephone number is 571-272-4139. The examiner
